How to use this PARTS LIST

The nameplate on any Bell & Gossett motor identifies the specific motor by part number and provides a complete description of the motor as shown in the example below.

The nameplate in the example identifies the motor as a 1/4 HP, 115V, 60 cycle, single (1) phase, 1725 RPM motor, part number M10534, manufactured in June, 1992. Although all motor nameplates do not look alike, all will display the part number and description of the motor. Some Bell & Gossett motors do not have a nameplate, but will display the motor information directly on the motor shell. **DO NOT REMOVE THE NAMEPLATE.** The nameplate identifies the motor for future reference. It is important when ordering replacement parts to furnish complete motor data.

To ensure that the correct parts will be selected, follow the procedure below:

1. Determine the part number of the motor using the information displayed on either the motor shell or the motor nameplate.
2. Determine the date the unit was manufactured. See chart below.
3. Refer to the index for the page number of the parts breakdown for the specific motor. The page number can be accessed through the index using either the "M," "MOT," or "MAG" number found on the motor nameplate, the description of the motor (also found on the nameplate) or the six digit power pack number.
4. Find the proper column in the parts breakdown for the motor number involved.
5. Select part numbers using the exploded views for parts identification. If a complete motor is required, use the six digit power pack number listed for the "M" number required.

DATE OF MANUFACTURE CODE						
The date code is made up of two or three characters depending upon the year.						
1946-1960 The number denotes the month. The last character is a letter and denotes the year.			1961-1982 Two characters. First letter is month. Second letter is year.		1983 - Three characters. The letter denotes the month. The numbers denote the year.	
1	January	G	1946	A	January	38 1983
