<b>1</b> Cut Wardflex tubing and remove PE coating to expose a minimum of 4 corrugations.	<b>2</b> Slide nut over tubing and place retainer ring. Leave 1-corrugation exposed on the end of tubing.	<b>3</b> Slide nut over retainer ring and hand-tighten nut to body.	<b>4</b> Tighten with wrenches until nut contacts body.

\*Table includes losses for four 90 degree bends and 2 end fittings. To compute flow capacity for tubing runs with a larger number of bends and/or fittings, add the appropriate number of feet to the actual run length using the following formula:  
L = 1.3 (n) L = Numbers of feet to be added to actual run length. n = Number of bends and/or fittings over six.
