Natural Gas flow is given in thousands of BTU/hr. - One cubic foot of LP gas = 1000 BTU.

Nominal pressure at the burner for Natural Gas is 3.5" of water column. (Typical machine supply 5"-7") Pipe length must include additional length for all fittings. Add approximately 5 feet of pipe per fitting.

Natural Gas Example: A machine with a burner that requires 440,000 BTU would need a 1 -1/4" pipe for a 20' long run.

LP Gas flow is given in thousands of BTU/hr. - One cubic foot of LP gas - 2516 BTU.

This chart refers to low pressure LP, after regulation Standard nominal pressure at the burner for Liquid Propane Gas is 11" of water column.

Pipe length must include additional length for all fittings. Add approximately 5 feet of pipe per fitting.

LP Example: A machine with a burner that requires 440,000 BTU would need a 1" pipe for a 20' long run.
